Tartrazine (FD & C yellow #5) anaphylaxis: a case report.

Desmond RE, Trautlein JJ.

Abstract

Tartrazine dye has been implicated in a variety of adverse reactions. There is a high correlation between aspirin sensitivity and **tartrazine** sensitivity but the reverse is exceedingly rare. Herewith is presented a case where repeated occult exposures to **tartrazine** yellow dye in a patient who could take aspirin with impunity was uncovered by a deduction. The ubiquitous nature and protean manifestations of dye sensitivity are discussed.
